What This Quest Is

Design, dream, and co-create a space of love — a place where people can truly arrive. Your home, garden, an outdoor corner, or a community gathering space. Transform it into somewhere that invites rest, connection, and genuine presence.

Story Card

Most of us have spent so little time in spaces that were designed for us to actually rest, connect, and feel held. We have inherited an architecture of efficiency. Offices, rental apartments, generic furniture, overhead lighting, no nature, no quiet. A space of love is not expensive or elaborate. It is intentional. It holds the needs of the people inside it: warmth, beauty, places to sit together, some living thing growing nearby, enough quiet to actually hear each other. It is somewhere that when you enter it, your shoulders drop.

How To Do This Quest

Step 1: Reflect on what rest and love actually require.

Where do you feel most at home in the world? What does that place have that others lack? Write your answers down.

Step 2: Choose a space to work with.

Pick somewhere you have access to and some ability to shape. Your home, a community space, an outdoor area. Start where you have permission.

Step 3: Identify what the space currently lacks.

Walk through it slowly. Notice the light, air, surfaces, sounds, smells. What does it invite? What does it make impossible?

Step 4: Dream it into something different.

Sketch, write, or vision-board what this space could be. Bring in natural materials, living plants, comfortable seating arranged for conversation.

Step 5: Do at least one physical act of transformation.

Rearrange, plant, build, or clear something. Document the before and after.

Step 6: Use the space with others.

Gather someone you care about in this space. Share a meal, a conversation, or simply time. Notice how the space affects what becomes possible between you.

Step 7: Document and share.

Create a short piece showing your space and what you learned from building and using it.

Deliverable

A documented space transformation with reflection on what changed in how people related inside it.

Tips

- The single biggest change in most indoor spaces: add living plants and remove overhead fluorescent light.
- A space that invites connection faces seats toward each other, not toward a screen.
- Outdoor spaces count. A fire circle, a garden corner, a hammock grove.
- Include something for the senses beyond sight: a scent, texture, sound of water.
