
Quest 3: Healing Whole

Holistic Wellness

Time: 3-5 hours | **Reward:** 111 \$ReGen + 1 RVoice

Deliverable:

Showcasing my Healing Whole video or article

The Story

The Healing Whole quest is about creating spaces of deep healing in our Earth - digging holes, composting, working with fungi, building the soil microbiome that will receive our seeds and our food. The soil becomes a literal extension of our digestive system. What we put into the ground, we eventually put into ourselves. Healing the soil and healing our bodies are the same act.

Step by Step

Step 1: Prepare Your Space

Choose a patch of earth to work with. It could be a garden bed, a forest floor, or a community space.

Step 2: Dig and Aerate

Work with the soil. Dig holes, break up compaction, introduce air and water pathways.

Step 3: Compost and Inoculate

Add compost, biochar, or fungal inoculants to enrich the microbial community.

Step 4: Document Your Process

Photograph before and after. Note what you added and why.

Step 5: Reflect and Share

Share your experience. What did you learn about soil? About yourself?

Tips

- Be vulnerable and authentic
- Include both challenges and breakthroughs
- Invite others to share their experiences
