

ReGen Civics Quest Field Guide

Sovereignty & Co-Evolution

regencivics.earth

What This Quest Is

Seeds are the oldest technology humans have ever stewarded. Growing plants that know us, and consciously co-evolving alongside the plants that nourish us. Saving, documenting, and swapping seeds via your LocalScale profile.

Story Card

For most of human history, the selection, saving, trading, and planting of seeds was a central act of community life. Villages developed distinct seed libraries over hundreds of generations, adapted to specific climates, soils, and tastes. That diversity is more than agricultural wealth. It is a cultural memory that co-evolved with the beings who stewarded it. Seed saving is an act of resistance and of love.

How To Do This Quest

Step 1: Gather your seeds.

Collect seeds from plants you have grown, received, purchased, or foraged. Focus on heirloom and open-pollinated varieties.

Step 2: Clean and dry your seeds.

Remove pulp or chaff. Dry thoroughly before storing. Seeds with any moisture will mold.

Step 3: Label and document.

For each variety: name, source, year saved, growing zone, growing tips or stories about this variety.

Step 4: Set up your LocalScale profile.

Create or update your profile at localscale.org.

Step 5: List your seeds for swap.

Add each variety with clear descriptions, photos if you have them, and what you would like in return.

Step 6: Connect and trade.

Reach out to others in your bioregion. Arrange swaps. Meet in person if you can.

Deliverable

Active seed listings on your LocalScale profile. Share the link as your quest submission.

Tips

- Even one or two varieties listed is a valid first submission. The point is to begin.
- Include growing zone and unusual requirements so swappers know what they are getting.
- Seed swaps are often social events. Propose a swap gathering if you know other gardeners.
